PDF Fixture Handbook

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

1 Introduction

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Internationalization considerations notwithstanding, characteristically incomprehensible typographical constructions demonstrate automatic hyphenation behaviour.

2 Lists

- First bullet item.
- Second bullet item that is deliberately long enough to wrap onto a second line so the hanging indent continuation is exercised by the extractor.
- Third bullet item.

1. Download the bytes.
2. Parse the document.
3. Lay out the markdown.

2.1 Code sample

```
function greet(name) {
  if (name) {
    return 'hello ' + name
  }
}
```

3 Data table

Engine	Pages	Seconds
alpha	12	0.8
beta	40	2.1
gamma	7	0.3

4 中文段落

这是第一段中文内容，用于验证中文字符的提取与段落合并。中文排版通常采用首行缩进两个字符的方式来区分段落，因此提取器需要识别缩进并正确断开段落，同时不能在中文字符之间插入多余的空格。

这是第二段中文内容。它同样足够长，可以折行显示，从而检验跨行合并时中文之间不会出现空格，并且标点符号保持原样。

5 Second page

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size. Layout analysis turns positioned glyph runs back into

readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.

This closing paragraph is long enough that it starts near the bottom of the second page and continues on the third page, so the extractor must join the two halves into one paragraph instead of breaking it at the page boundary, even though running headers and footers sit in between them.

6 Closing notes

Layout analysis turns positioned glyph runs back into readable structure. The extractor groups runs into lines, lines into paragraphs, and recognizes headings from numbering, outline entries, and type size.
